## SCILINK Result in Brief

Project reference: 252206  
Funded under: FP7-PEOPLE  
Country: AUSTRIA

### Smarter web publishing for science research

How can scientists release the results of their research so that they have the maximum impact? A project is bringing science publishing into the 21st century by developing innovative web-based linking, aggregation, authoring and presentation solutions.

The World Wide Web has enabled the instant sharing and much wider distribution of research results. However, current web publishing still resembles traditional print production processes and can fail to deliver the information that the scientific community needs in an easy-to-use format.

SCILINK is an EU-funded project that is reassessing how researchers publish their results. The aim is to create much better links between results and related resources, allowing better sharing, reuse and enhancement of scientific assets.

The main features of the SCILINK project include a framework to automate the linking of semantically related resources on the web, especially sources such as <http://dbpedia.org/About> (DBpedia), solutions to ensure link integrity, and new aggregation, authoring and presentation tools.

Early work during the project focused on strategies for link maintenance and produced a resource synchronisation framework called ResourceSync. The project has also collaborated on an international initiative to develop web-based annotations. The result is Maphub, a system to annotate historical maps as linked data and develop a function for semantic tagging.

SCILINK is also contributing to the <http://www.europeana.eu/> (Europeana project), an open-source digital archive of European culture. It has developed a pilot system that has tested strategies to link open metadata on the 2.4 million texts, images and audio-video material in the Europeana archive.

SCILINK efforts and outcomes should enable radically different ways to use and present research data. European citizens stand to benefit from these new ways to gain and expand knowledge that the project develops.

### Report Summary

- Periodic Report Summary - SCILINK (Semiautomatic methods for the creation and maintenance of links between scientific resource aggregations on the web)

- Rewritten for broader public
- Available in 6 languages
- Support exploitation and innovation

# OpenAIRE for Open Access publications

The screenshot shows the OpenAIRE website interface. At the top, there is a navigation bar with the OpenAIRE logo and several menu items: PARTICIPATE (DEPOSIT, JOIN), SEARCH (PUBLICATIONS, DATA, PROJECTS), STATISTICS (OA, PROJECTS, TOPICS), SUPPORT (FAQ, HELPDESK, GUIDES), and OPEN ACCESS IN EUROPE. Below the navigation bar, the page is titled "Home".

The main content area is divided into two columns. The left column features a "SCILINK" project entry with the following details:

TITLE	Semiautomatic Methods for the Creation and Maintenance of Links between Scientific Resource Aggregations on the Web
FUNDER	FP7
FUNDING STREAM	SP3
SCIENTIFIC AREA	PEOPLE
CALL	FP7-PEOPLE-2009-IOF
CONTRACT (GA) NUMBER	252206
START DATE	01/03/2011
END DATE	28/02/2014
SPECIAL CLAUSE 39	no
ORGANIZATIONS	UNIVIE
MORE INFORMATION	<a href="#">Detailed project information (CORDIS)</a>

The right column contains an "App Box" with several interactive elements:

- Publication details
- Dynamically incorporate publications in your site (HTML)
- View EC progress report (HTML)
- Download EC progress report (CSV)
- Link Research Results
- Deposit Publications

Below the App Box, there is a Joomla SEF URLs by Artio link.

At the bottom of the page, there is a "Publications" tab selected, showing a list of publications. The first entry is "Finding Quality Issues in SKOS Vocabularies" by Mader, Christian; Haslhofer, Bernhard; Isaac, Antoine (2012), associated with the SCILINK (252206) project. The abstract text is partially visible: "The Simple Knowledge Organization System (SKOS) is a standard model for controlled vocabularies on the Web. However, SKOS vocabularies often differ in terms of quality, which reduces their applicability across system boundaries. Here we investigate how we can support taxonomists in improving SKOS vocabularies by pointing out quality issues that go beyond the integrity constraints defined in the SKOS specification. We identified potential quantifiable quality issues and forma..."
